OBJECTIVE

Computer Science student developing as a Front-End Developer through hands-on React and JavaScript training, and building toward a career in Full-Stack Software Engineering. Strengthening a broad software foundation through coursework in Problem Solving, Data Structures, Networking, Operating Systems, Software Engineering, and Databases, alongside practical training and project work. Comfortable working in team environments and collaborative Git/GitHub workflows, with a growing interest in integrating AI — including agentic AI — into software as part of a broader software engineering skill set.

EDUCATION

Tanta University, Faculty of Computers and Informatics

August 2025 – June 2029

GPA: 3.48/4.0

Relevant Coursework: Calculus, Fundamentals of Information Technology, Data Structures, Software Engineering, Database

Gharbiya STEM High School

August 2023 – July 2025

EXPERIENCE

React Front-End Trainee — DEPI

July 2026 – Present

- Training in HTML, CSS, JavaScript, Bootstrap, React, and Next.js, alongside Git/GitHub, UI/UX fundamentals, personal branding, Business English, and freelancing fundamentals, through hands-on responsive website projects and team-based activities.
- Independently built and published a responsive Bakery website (HTML, CSS) to GitHub, hand-coding the layout with close attention to implementation detail and visual accuracy.
- Built a responsive personal portfolio (HTML, CSS) as part of the training curriculum.
- Collaborated in team projects covering presentations, Business English, and personal branding.

.NET Web Development Summer Training — ITI

July 2026 – August 2026

- Trained in C#, Object-Oriented Programming, ASP.NET MVC, Entity Framework/EF Core, LINQ, APIs, authentication/authorization, CRUD, SQL Server, stored procedures, ERD/database mapping, design patterns, and the repository and dependency injection patterns.
- Contributed to Asrar, an e-commerce marketplace graduation project, implementing the frontend/UI and the platform's visual design and theme.
- Worked within a GitHub-based team workflow involving task division, individual deadlines, branches, commits, and pull requests.

Backend AI Engineering Intern — FlyRank AI

July 2026 – Present

- Ongoing training and hands-on exposure to backend engineering and AI/LLM integration, including Python-based backend development, APIs, RAG concepts, and AI agents/agentic AI workflows.
- Gaining experience with databases, data modeling, and Git/GitHub within a collaborative, AI-assisted development workflow.

PROJECTS

- **Schizophrenia Monitoring System:** Developed an IoT-based monitoring system tracking schizophrenic patients' activity through heart-rate and movement-pattern sensors, using React.js for the frontend and Node.js with MongoDB for the backend and database.
- **RFID Attendance System:** Built an RFID-based attendance system integrating hardware sensors with a web dashboard for managing student attendance records.
- **Dropout Detection ML Model:** Created a machine learning model to analyze educational data and predict student dropout risk.

CERTIFICATIONS

- Ubuntu Linux Essentials — ITI Platform Mahara-Tech — May 2026
- Huawei HCIA-AI Course — Huawei ICT Academy — April 2026
- Python Programming Basics — ITI Platform Mahara-Tech — February 2026
- IELTS Preparation Camp — EngliVision — July 2024

VOLUNTEERING / ACTIVITIES

- **Resala STEM Volunteer:** Participated in volunteering activities including visits to orphanages and elderly care homes, and organizing and sorting donated clothes and medications.
- **Founder & Team Leader — Zephyr Initiative:** Founded and led a ~15-member student initiative focused on mental health awareness among youth, planning and executing complete school events from concept through delivery, including interactive activities, games, and competitions.

SKILLS

Programming Languages: C++, Python, JavaScript, C#

Frontend: HTML, CSS, Bootstrap, React.js, Next.js, Responsive Web Design

Backend / Databases: Node.js, ASP.NET MVC, REST APIs, Entity Framework/EF Core, LINQ, MongoDB, SQL Server

AI / Machine Learning: Machine Learning Fundamentals, AI/LLM Integration, RAG Concepts, AI Agents / Agentic AI Concepts

Tools & CS Fundamentals: Git, GitHub, VS Code, Linux/Ubuntu, Data Structures, Problem Solving, Networking, Operating Systems, OOP, Software Engineering Fundamentals

Languages: Arabic — Native, English — Fluent
